

Infinity Ellipsis projected sign

INTERIOR

Infinity Ellipsis

Infinity Ellipsis wall sign

WHY TRY TO FIT A SQUARE PEG in a round hole?

Who says that signs always have to be rectangular? Or that they cannot play a key role in interior architecture?

With Infinity Ellipsis, Modulex has once more broken with convention and blazed a new trail in the field of architectural signage. This range was inspired by our popular Infinity Basic series, which is famous for its ease of installation, high quality and competitive price. In the Infinity Ellipsis range, we have created

a variety of elliptical models that on their own or in creative combinations open up a whole new world of opportunities to allow the signs in a building to step up and step into character. The elliptical shape makes it possible to use the signs in a variety of ways.

The degree of graphic freedom is also in a class of its own and can best be summed up in a single word: endless.

Shapes

Infinity Ellipsis consists of a broad range of standard individual panels in various sizes and elliptical shapes. The panels are available for wall and wing mounting, for suspension and as floor and table top signs. In addition, many of the panels can be supplied as Paperflex models, making it possible to change the information displayed in the blink of an eye.

Over and above the individual panels, we have put together a range of exciting combinations where the various panels are paired together.

Taken as a whole and combined with the extensive graphical freedom, the range provides almost endless opportunities to build up creative interior design environments in offices, hotels, conference centres, hospitals and other public buildings.

Materials

The Infinity Ellipsis panels are made of 3 mm aluminium of the highest quality. If signs are to feature Braille or raised lettering, the panels are supplied in 3 mm phenol.

Every sign is accompanied by a 12 mm black foam plate in the same dimensions as the panel. This plate makes it simple to install the sign using the clips supplied, and, at the same time, it can be positioned between the wall and the panel to create an exciting visual effect. Alternatively, the foam plate can be omitted from the installation for a "floating" effect.

Text and graphics

Infinity Ellipsis places no limits on creativity. The solutions available include vinyl, print on film and in particular print on panel. For this last printing method, a resolution of no less than 1,480 dpi is used. In practice this means that it is possible to print even the finest details in impressive quality. This is particularly noticeable in the full-coverage effect surfaces such as "carbon fibre" and "leather" that are created by Modulex' designers, and which can be supplied on request. In fact, the print on panel technique makes it possible to transform the signs into veritable works of art.

Anyone can produce a sign

Do not think of Modulex as simply a sign manufacturer. At the end of the day, our products are first and foremost a means rather than an end in themselves.

Rather, think of us as leading experts in Wayfinding and Information Management. As a partner whose deep insight into user behaviour enables us to create efficient sign strategies for complex environments.

In other words, choosing Modulex means choosing more than just signs with a unique design and unrivalled quality. It means choosing solutions.

Leading the way since 1963

Modulex is one of the leading suppliers of Wayfinding and Information Management in the form of architectural sign solutions. The company was founded in 1963 as part of the LEGO Group, and we operate today in more than 35 countries. Thanks to our global presence, we have the capacity to deliver sign solutions that ensure brand consistency across continents. At the same time, we have a finely tuned logistical setup and extensive project experience which ensure that we can complete even the most complex delivery without problems – and on time.
