

Macer

Simplicity is the keyword for Macer – from design to construction. With its clean lines, Macer will support your message regarding identity or wayfinding and has set new standards within exterior signage.

Intelligent Design

Macer brings together only 3 elements – a steel support for strength, a protective cover for elegance and a panel to support your identity and wayfinding information.

Due to its freedom of construction, any panel shape can be achieved – combined with direct printing, digital graphics or applied vinyl text, Macer creates a unique experience for your brand.

Durability

Macer is designed to resist wind and weather. Constructed from galvanised steel, etronite and painted aluminium, Macer will look good for a long time. Panels can be changed over time to support your changing brand or communication needs.
